

## Accu-Med Application Service Provider Privacy & Security Policies

<b>Access</b>	Accu-Med applications feature user configurable and user maintained role-based security options. Security features limit access to specific areas of the applications so employees access only those areas of the application to which they have rights. View only access is an option for many areas. Automatic logoffs may be set to user defined durations.
<b>Authorization</b>	Authorization is via user name and password from workstations and remote devices. Passwords may be set to expire at user defined intervals. Data delivered to the application via HL7 must be done through a user-configurable portal that restricts inbound and outbound access to user-authorized sources
<b>Authentication</b>	All entries are date and time stamped as they are written to the database and user is identified. Data delivered to the application via HL7 must be pass through a user-configurable portal that restricts inbound and outbound access to user-authorized sources.
<b>Audit</b>	Access to resident data is logged by user. Audit logging is configurable and reporting tools are provided to track user access to resident information. Auditing is available by user or by resident.
<b>Secondary Uses of Data</b>	Aggregated MDS data used for facility and multi-facility performance measurement and comparison purposes may be de-identified and used for research purposes by Accu-Med Services.
<b>Data Ownership</b>	Client maintains ownership of data.
